# WHEN ARE YOU MOST “AT RISK” TO CRASH

Larry Crouse Chapter Educator

Dawn or dusk conditions? Those are potentially dangerous times but not what I'm thinking.

Riding in heavy traffic? Another potentially dangerous time but, again, not what I'm looking for.

Riding in the mountains with all the curves and stuff? Possibly a dangerous time but no.

The majority of motorcycle crashes (90% according to the Hurt Report conducted in the 1970's) occur within the first hour of riding. More interesting though is that 50% of the crashes happen within the first 6 minutes! That's why most crashes happen within 5 miles of home.

The factors involved here are ATTENTION and CONCENTRATION. We don't readily transition ourselves from one activity (like being at home or work) to another (riding the motorcycle). How focused can we be on the inherent hazards of riding when we are still waking up or thinking about the problems at work?

That's why becoming an ATGATT (All The Gear All The Time) rider can be so valuable. In my case, I have to go get the motorcycle key from the key box, take my riding suit off its hanger and put it on, put on my gloves, put on my helmet, take my gloves back off so I can fasten my helmet, put my gloves back on, walk out to the bike, take my gloves back off so I can un-zip my riding suit to get to the key that's in my jeans pocket, etc. etc. Yes, I'm a goofball who can't remember to keep my keys out (I doubt that I'm alone here). The point is that all these small steps take some time. During that time that I'm unconsciously getting myself READY TO RIDE.

Being READY TO RIDE and having my head “in the game” helps me to ride more safely. Are you taking steps to make yourself READY TO RIDE ?
